General Description of the Course
How do we study what religious persons and communities are doing and saying? What are the ethical issues that might arise in the course of doing such studies? How do we transform what we hear and observe in religious communities into texts through writing? The study of Religions is a deeply interdisciplinary field in which students must use theories and methods drawn from many other disciplines in their understanding of the experiences, beliefs, and ritual forms of religious people. In this course we will learn to apply techniques used in ethnography to the study of lived religious experience. We will learn how to design research, participate in religious rituals for the purpose of observing and recording religious behavior, ask questions, write field notes, interpret and transform our primary field observations into ethnographic documents through the use of a variety of writing styles. We will also focus attention on ethical issues that might arise in the course of doing research in religious communities and the appropriate ways of dealing with such issues. Although the course is designed to meet the academic needs of students interested in field research in religious communities students interested in field research in related disciplines will also benefit from taking it.

Course Objectives
Religious traditions are not only integral aspects of cultures. They are “subcultures” or “worlds” themselves. The experiences of religious people can thus be studied through the use of ethnographic methods. At the end of this course students will be familiar with the practical skills they will require to successfully immerse in religious communities or “worlds” in order to understand the experiences of members from their own perspectives. Students will also learn skills in writing and in appraising ethnographies on religious and other related human experiences.

A note on Textbooks and essays
This course is about practical techniques and skills used in studying human communities and how they can be applied in the study of religious communities. The text and essays on which lectures and class discussions may not be based necessarily on religious phenomena but a diverse range of human experiences and settings.
Students will be expected to glean from these readings insights that they can apply in the study of religious phenomena.

**Course Requirements**
1. Class attendance and participation in class discussions
2. There will be two take home exams
3. Students will be expected to design, conduct and report on mini research projects.

**Grading and Evaluation:**
The progress of students and their understanding of the course material will be determined based on attendance and participation in class discussions, tests, presentations based on projects and a final report.

TAKE HOME EXAMS

There will be 2 exams. Each exam will comprise 4 essay questions, out of which a student would be expected to answer 2. Questions for the undergraduate take home exams will be Different from those of the graduate exams. Page requirements for answers not more than three pages per question for graduate students. Not more than two pages per question for undergrads.

THE RESEARCH PROJECT

Each student will design and implement a small field work project based on observation and interviewing. This project can be done individually or in a team with one or more partners. Students will submit a research proposal. In this proposal student must state the project topics, provide a summary of what the project will involve and the research questions. Topics are open but students must focus on a religious phenomenon, e.g. local constructions of religious identities [that is, a specific religious community], experiences and the life histories of particular individuals associated with specific religious communities, the life history and daily life of a key religious personality etc. Bi weekly Submissions Individual students or groups will keep a field note book during the course of the semester and samples of entries about their research projects, both as they are formulating them and as they are conducting the research will be submitted to professor bi weekly for grading. This would include notes taken during field interviews, transcribed interviews [if any or simply summaries] data interpretations and analyses, and other relevant experiences. The final report will be presented in class at the end of the semester.

IMPORTANT NOTE:
The professor reserves the right to amend this syllabus as determined by the demands of the course during the semester.
